# Counting Popular Matchings in House Allocation Problems 

Rupam Acharyya, Sourav Chakraborty and Nitesh Jha Chennai Mathematical Institute India

CSR 2014

## The Problem

Agents

$a_{6} \bullet$

Houses

## The Problem

## The Problem

$$
a_{1}: h_{1} \quad h_{2} \quad h_{3} \quad h_{4}
$$

## The Problem Instance

## Preferences

| $a_{1}$ | $h_{1}$ | $h_{2}$ | $h_{3}$ | $h_{4}$ |
| ---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $h_{1}$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $h_{2}$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $h_{2}$ | $h_{4}$ | $h_{3}$ |  |
| $a_{5}$ | $h_{5}$ | $h_{1}$ |  |  |
| $a_{6}$ | $h_{5}$ | $h_{2}$ |  |  |

## The Problem Instance

## Preferences

| $a_{1}$ | $h_{1}$ | $h_{2}$ | $h_{3}$ | $h_{4}$ |
| ---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $h_{1}$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $h_{2}$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $h_{2}$ | $h_{4}$ | $h_{3}$ |  |
| $a_{5}$ | $h_{5}$ | $h_{1}$ |  |  |
| $a_{6}$ | $h_{5}$ | $h_{2}$ |  |  |

Capacities

| $h_{1}$ | 1 |
| :---: | :---: |
| $h_{2}$ | 1 |
| $h_{3}$ | 2 |
| $h_{4}$ | 2 |
| $h_{5}$ | 2 |

## A Matching

## A Matching

Is it a good matching?

## Comparing two matchings

## Voting

## Voting

$a_{1}$
$M_{1}$

## Voting

$$
\begin{aligned}
& \begin{array}{ccc:c:cc}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} \\
M_{1} & M_{2} & M_{1} & * & * & *
\end{array}
\end{aligned}
$$

## "more popular than"

$$
\begin{array}{cccccc}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} \\
M_{1} & M_{2} & M_{1} & * & * & *
\end{array}
$$

$M_{1}$ more popular than $M_{2}$

## Popular Matching - Definition

$M$ is popular if $\nexists M^{\prime}$ more popular than $M$

## Popular Matching - Definition

## $M$ is popular if $\nexists M^{\prime}$ more popular than $M$

## Questions

Does there always exist one? No.
Can there exist more than one? Yes.

## Instances with Ties

$$
a_{1}: h_{1}\left(h_{2} h_{3}\right) h_{4}
$$

## History

[Abraham et al. 2005] gave a poly-time algorithm to output a popular matching

## History

[Abraham et al. 2005] gave a poly-time algorithm to output a popular matching

Studied Extensively in Different Settings

- Random Popular Matching [Mahdian 2006]
- Different Optimality Criteria [KNN20I0, KMN20II]
- Preferences on both sides [Kavitha 2012]
- Games on Popular Matching [Nasre 2013]

## Counting Popular Matchings

Hardness
Approximation

## Counting Popular Matchings

## Counting Popular Matchings

| Hardness | Approximation |
| :---: | :---: |

## Fully Polynomial Randomised Polynomial Scheme

For problem $f: \Sigma^{*} \rightarrow \mathrm{~N}$, input $x \in \Sigma^{*}$, tolerance $\epsilon>0$, error probability $\delta>0$ outputs $N$ such that for all $x$ :

$$
P[(1-\epsilon) f(x) \leq N \leq(1+\epsilon) f(x)] \geq \delta
$$

in time $\operatorname{poly}(|x|, 1 / \epsilon, \log 1 / \delta)$.

## Our Focus

## Strict Ordering, Integer Capacities

## Preferences

| $a_{1}$ | $h_{1}$ | $h_{2}$ | $h_{3}$ | $h_{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $h_{1}$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $h_{2}$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $h_{2}$ | $h_{4}$ | $h_{3}$ |  |

Capacities

## Popular Matching Characterisation

In every popular matching:

- every agent gets either its f-house or s-house

## Popular Matching Characterisation

In every popular matching:

- every agent gets either its f-house or s-house
- every f-house is used to maximum capacity

| $a_{1}$ | $\left(h_{1}\right.$ | $h_{2}$ | $h_{3}$ | $h_{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $\left(h_{1}\right.$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $h_{2}$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $\left(h_{2}\right.$ | $h_{4}$ | $h_{3}$ |  |

| $h_{1}$ | 1 |
| :---: | :---: |
| $h_{2}$ | 1 |
| $h_{3}$ | 2 |
| $h_{4}$ | 2 |

## Switching Graph Characterisation

Another way to look at popular matchings!

| $a_{1}$ | $\left(h_{1}\right)$ | $h_{2}$ | $h_{3}$ | $h_{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $\left(h_{1}\right)$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $\left(h_{2}\right)$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $\left(h_{2}\right.$ | $h_{4}$ | $h_{3}$ |  |

| $a_{1}$ | $\left(h_{1}\right.$ | $b_{2}$ | $\left(h_{3}\right)$ | $h_{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| $a_{2}$ | $\left(h_{1}\right.$ | $h_{3}$ | $h_{2}$ |  |
| $a_{3}$ | $h_{2}$ | $h_{1}$ | $h_{3}$ |  |
| $a_{4}$ | $\left(h_{2}\right.$ | $h_{4}$ | $h_{3}$ |  |

(h3)
$h_{1}$

# Moving from one Popular Matching to Another 

edge-disjoint union of switching paths and switching cycles could be reversed

## Moving from one Popular Matching to Another

## edge-disjoint union of switching paths and switching cycles could be reversed

Careful: number of switching paths ending at a house should be less than its remaining capacity

Theorem If $G_{M}$ is the switching graph of the CHA instance $G$ with respect to a popular matching $M$, then
(i) every switching move on $G_{M}$ generates another popular matching, and
(ii) every popular matching of $G$ can be generated by a switching move on $M$.
