# Outline

- 1 Introduction
  - Problem Statement and Results
  - Lower Bounds for Cut Size
  - Parameterizing MAX-CUT
- 2 FPT Algorithm
- 3 Polynomial Kernel

# Cut of a graph $G$

## Definition

- A *cut* of  $G$  is a function

$$f : V(G) \rightarrow \{0, 1\}$$

.

# Cut of a graph $G$

## Definition

- A *cut* of  $G$  is a function

$$f : V(G) \rightarrow \{0, 1\}$$

.

- Size of the cut  $f$ ,

$$\|f\| = |\{uv \in E(G) \mid f(u) \neq f(v)\}|$$

.

# MAX-CUT

## Definition

- MAX-CUT

**Input:** A graph  $G$  and a non-negative integer  $k$ .

**Question:** Does  $G$  have a cut of size at least  $k$ ?

# MAX-CUT

## Definition

- MAX-CUT

**Input:** A graph  $G$  and a non-negative integer  $k$ .

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- MAX-CUT is NP-hard.

# Outline

- 1 Introduction
  - Problem Statement and Results
  - Lower Bounds for Cut Size
  - Parameterizing MAX-CUT
- 2 FPT Algorithm
- 3 Polynomial Kernel

# Problem Statement and Results

- MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)

**Input:** A **connected**  $n$ -vertex graph  $G$  and a non-negative integer  $k$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $n - 1 + k$ ?

# Problem Statement and Results

- MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)

**Input:** A **connected**  $n$ -vertex graph  $G$  and a non-negative integer  $k$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $n - 1 + k$ ?

- **Results:**

- $8^k n^{\mathcal{O}(1)}$  algorithm and  $\mathcal{O}(k^5)$  kernel.
- No  $2^{o(k)}$  algorithm unless the Exponential Time Hypothesis fails.

# Outline

- 1 Introduction
  - Problem Statement and Results
  - Lower Bounds for Cut Size
  - Parameterizing MAX-CUT
- 2 FPT Algorithm
- 3 Polynomial Kernel

# Lower Bounds for Cut Size

- Graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .

# Lower Bounds for Cut Size

- Graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .
- $G$  has a cut of size at least
  - ①  $m/2$  [Erdős, 1965].

# Lower Bounds for Cut Size

- Graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .
- $G$  has a cut of size at least
  - ①  $m/2$  [Erdős, 1965].
  - ②  $m/2 + (n - 1)/4$  if  $G$  is connected [Edwards, 1975] .  
Edwards-Erdős bound.

# Lower Bounds for Cut Size

- Graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .
- $G$  has a cut of size at least
  - ①  $m/2$  [Erdős, 1965].
  - ②  $m/2 + (n - 1)/4$  if  $G$  is connected [Edwards, 1975] .  
Edwards-Erdős bound.
  - ③  $n - 1$  if  $G$  is connected.  
Spanning tree bound.

# Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ .
- Cut of size at least  $n - 1$ .

# Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ .
- Cut of size at least  $n - 1$ .

$n = 5$

# Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ .
- Cut of size at least  $n - 1$ .

$n = 5$

Spanning Tree  
 $n - 1$  edges

# Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$
- Cut of size at least  $n - 1$

# Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ .
- Cut of size at least  $n - 1$ .

$n = 5$

Spanning tree  
 $n - 1$  edges  
 2-colorable

Cut of size  $n - 1$

# Edwards-Erdős Bound vs. Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .
- **Edwards-Erdős Bound:**  $m/2 + (n - 1)/4$ .
- **Spanning Tree Bound:**  $n - 1$ .

# Edwards-Erdős Bound vs. Spanning Tree Bound

- Connected graph  $G$ ,  $|V(G)| = n$ ,  $|E(G)| = m$ .
- **Edwards-Erdős Bound:**  $m/2 + (n - 1)/4$ .
- **Spanning Tree Bound:**  $n - 1$ .
- Spanning Tree bound gives a better guarantee for cut size on *sparse graphs*.
- $n - 1 > m/2 + (n - 1)/4 \iff$  (average degree of  $G$ )  $< 3$ .

# Outline

# Parameterizing MAX-CUT

- Parameterize by cut size?

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT
  - $k \leq m/2 \implies$  yes.

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT
  - $k \leq m/2 \implies$  yes.
  - $m \leq 2k$ . Brute force.

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT

- $k \leq m/2 \implies$  yes.
- $m \leq 2k$ . Brute force.

- Parameterize above the cut size [Mahajan and Raman, 1997]

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT

- $k \leq m/2 \implies$  yes.
- $m \leq 2k$ . Brute force.

- Parameterize above the cut size [Mahajan and Raman, 1997]

**Question:** Does  $G$  have a cut of size at least  $m/2 + k$ ?

# Parameterizing MAX-CUT

- Parameterize by cut size?

**Input:** A graph  $G$  and a positive integer  $k$ ,  $|V(G)| = n$ ,  
 $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $k$ ?

- Trivially FPT

- $k \leq m/2 \implies$  yes.
- $m \leq 2k$ . Brute force.

- Parameterize above the cut size [Mahajan and Raman, 1997]

**Question:** Does  $G$  have a cut of size at least  $m/2 + k$ ?

- FPT.
- *Above Guarantee* parameterization.

# MAX-CUT: Above Guarantee Parameterizations

- MAX-CUT ABOVE EDWARDS-ERDŐS (MAX-CUT-AEE)

**Input:** A **connected** graph  $G$  and a positive integer  $k$ ,  
 $|V(G)| = n$ ,  $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  
 $m/2 + (n - 1)/4 + k$ ?

# MAX-CUT: Above Guarantee Parameterizations

- MAX-CUT ABOVE EDWARDS-ERDŐS (MAX-CUT-AEE)

**Input:** A **connected** graph  $G$  and a positive integer  $k$ ,  
 $|V(G)| = n$ ,  $|E(G)| = m$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  
 $m/2 + (n - 1)/4 + k$ ?

- **Results:**

- $8^k n^{\mathcal{O}(1)}$  algorithm and  $\mathcal{O}(k^5)$  kernel [Crowston et al., 2012]
- Extended to signed graphs with an  $\mathcal{O}(k)$  kernel [Etscheid and Mnich, 2016]

# MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)

## Our Problem

- MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)  
**Input:** A **connected** graph  $G$  and a positive integer  $k$ ,  
 $|V(G)| = n$ .  
**Parameter:**  $k$   
**Question:** Does  $G$  have a cut of size at least  $n - 1 + k$ ?

# MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)

## Our Problem

- MAX-CUT ABOVE SPANNING TREE (MAX-CUT-AST)

**Input:** A **connected** graph  $G$  and a positive integer  $k$ ,  
 $|V(G)| = n$ .

**Parameter:**  $k$

**Question:** Does  $G$  have a cut of size at least  $n - 1 + k$ ?

- **Results:**

- $8^k n^{\mathcal{O}(1)}$  algorithm and  $\mathcal{O}(k^5)$  kernel.
- No  $2^{\mathcal{O}(k)}$  algorithm.

# Algorithm

## Strategy

- In polynomial time  
either conclude that  $(G, k)$  is a yes-instance

# Algorithm

## Strategy

- In polynomial time
  - either conclude that  $(G, k)$  is a yes-instance
  - or find a small set  $S$  such that  $G - S$  has a nice structure.

# Algorithm

## Strategy

- In polynomial time
  - either conclude that  $(G, k)$  is a yes-instance
  - or find a small set  $S$  such that  $G - S$  has a nice structure.
- Guess the optimal partition of  $S$ .
- Optimally extend each guess to a partition of  $G - S$ .

# Algorithm

## Strategy

- In polynomial time
  - either conclude that  $(G, k)$  is a yes-instance
  - or find a small set  $S$  such that  $G - S$  has a nice structure.
- Guess the optimal partition of  $S$ .
- Optimally extend each guess to a partition of  $G - S$ .
  - Define an auxiliary problem on  $G - S$ .

# Algorithm

## Strategy

- In polynomial time
  - either conclude that  $(G, k)$  is a yes-instance
  - or find a small set  $S$  such that  $G - S$  has a nice structure.
- Guess the optimal partition of  $S$ .
- Optimally extend each guess to a partition of  $G - S$ .
  - Define an auxiliary problem on  $G - S$ .
  - Solve it in polynomial time by exploiting  $G - S$ 's nice structure.

# Outline of Algorithm

- Apply a set of **one-way** reduction rules.

# Outline of Algorithm

- Apply a set of **one-way** reduction rules.
- One-way rule:  $(G, k) \rightarrow (G', k')$  such that
  - $(G', k')$  is a yes-instance  $\implies (G, k)$  is a yes-instance.
  - Converse need not hold.

# Clique-cycle-forest

## Definition

A **clique** is a clique-cycle-forest.

# Clique-cycle-forest

## Definition

A **cycle** is a clique-cycle-forest.

# Clique-cycle-forest

## Definition

**Disjoint union** of two clique-cycle-forests is a clique-cycle-forest.

# Clique-cycle-forest

## Definition

Graph obtained by **identifying one vertex each from two different components** of a clique-cycle-forest is again a clique-cycle-forest.

# Clique-cycle-forest

## Definition

Graph obtained by identifying one vertex each from two different components of a clique-cycle-forest is again a clique-cycle-forest.

# Clique-cycle-forest

## Example

# FPT Algorithm

## Reduction Rules

- **Rule 1:**

# FPT Algorithm

## Reduction Rules

- **Rule 1:** Apply if  $\exists v \in V(G')$  and  $X \subseteq V(G')$  such that
  - $G'[X]$  is a connected component of  $G' - \{v\}$ ,
  - $G'[X \cup \{v\}]$  is a clique.

# FPT Algorithm

## Reduction Rules

- **Rule 1:** Apply if  $\exists v \in V(G')$  and  $X \subseteq V(G')$  such that
  - $G'[X]$  is a connected component of  $G' - \{v\}$ ,
  - $G'[X \cup \{v\}]$  is a clique.

- $k \leq t$ .
- $2^{o(k)}$  algorithm for MAX-CUT-AST will imply  $2^{o(t)}$  algorithm for MAX-CUT.

# Polynomial Kernel Strategy

# Polynomial Kernel

## Strategy

- $G$  has an even cycle implies  $G$  has a cut of size  $n - 1 + 1 = n$ .
- One even cycle means one additional edge in the cut.
- If  $G$  has  $k$  vertex disjoint even cycles, then  $(G, k)$  is a yes-instance.
- Cycles need not be vertex disjoint.
- Identify families of cycles such that all edges of all the cycles in the family fall into a cut.

# Polynomial Kernel

## Strategy contd.

- $G - S$  is a clique-cycle-forest, a forest of blocks.
- Bound the number of components of  $G - S$ .
- Bound the number of blocks in each component.
- Bound the size of each block.
- $\mathcal{O}(k^5)$  kernel.

# Results and Conclusion

- FPT algorithm and  $\mathcal{O}(k^5)$  kernel.
- Simple reduction to MAX-CUT-AEE possible?
- $\mathcal{O}(k)$  kernel?
- Extend the results to signed graphs?

Thank You.
